

GCT's Single Chip Advantage:
RF + LTE & WiMAX Basebands on a Single Chip

Features

- Cat4 LTE: 150 Mbps downlink, 50 Mbps uplink
- Supports WiMAX IEEE 802.16e
- 3GPP Release 9
- On-Chip VoLTE, eMBMS
- TDD and FDD: Supports all frequency bands
- IMS, OTA-DM, etc. integrated
- Seamless handover between TDD and FDD-LTE
- Supports seamless FDD/TDD LTE and WiMAX handover
- Hostless stand-alone (CPE, USB Dongle, M2M)
- Complete LTE protocol stack and host software
- Global LTE roaming (multi-band support: >8 bands simultaneously)
- Pin compatible with GDM7243S

Key Benefits

- Multi-Mode LTE & WiMAX
- Low Power Consumption
- High Integration (BB, RF), lower cost of ownership
- Turnkey VoLTE, eMBMS, etc.
- High Performance
- Inter and Intra-band Capability

Interfaces

- | | |
|--------------------------|--------|
| • USB2 (Device & Host) | • I2S |
| • SDIO 3 (Device & Host) | • PCM |
| • HSI | • NAND |
| • SPI | • UART |
| • E-MEM | • GPIO |
| • R-GMII | • SIM |

Package Outline

- 12x12x1.2 mm BGA package
- Integrated memory optional

Applications

- Smartphones, Tablets, etc.
- Mobile Hosts, CPEs
- USB Dongles
- M2M Modules
- Ultrabooks, Chromebooks
- Data cards

GDM7243M
